ABSTRACT

Campus Cravings is a web-based food ordering system designed specifically for university campuses. It provides a centralized platform where students can browse menus from various on-campus restaurants, place orders, and manage their profiles. The system also includes an admin interface for overseeing operations and a complaint management system for student feedback.

INTRODUCTION

Motivation

In a busy campus environment, students often face significant delays at food outlets during peak hours, leading to wasted time and overcrowded canteens. Traditional manual ordering systems are prone to errors and lack real-time updates for both customers and vendors. The motivation behind **Campus Cravings** is to digitize this ecosystem, providing a "Smart Campus" solution that enhances convenience for students and operational efficiency for administrations.

Objectives

- To streamline the food-ordering process within the university campus.
- To provide a user-friendly interface for students to discover variety in campus dining.
- To implement a secure role-based access system for students and administrators.
- To ensure responsive design for seamless design across devices.

Scope

The scope of this project includes:

- **User Management:** Secure registration and login for student, and administrations.
- **Digital Menus:** Interactive browsing of various campus restaurants and their categorized menus.
- **Order Lifestyle:** Full cycle from cart management and checkout to order status updates.
- **Payment Simulation:** A dedicated interface to simulate and record transaction success.
- **Support System:** A module for filing and complaints related to orders.
- **Profile Management:** Personalized dashboards for users to manage their credentials and preferences.

CORE FEATURES

User Authentication and Roles

- **Student (Customer):** Explore restaurants, browse menus, place orders, and manage profiles.
- **Admin:** Oversees the system, manages users/restaurants, and resolves conflicts.

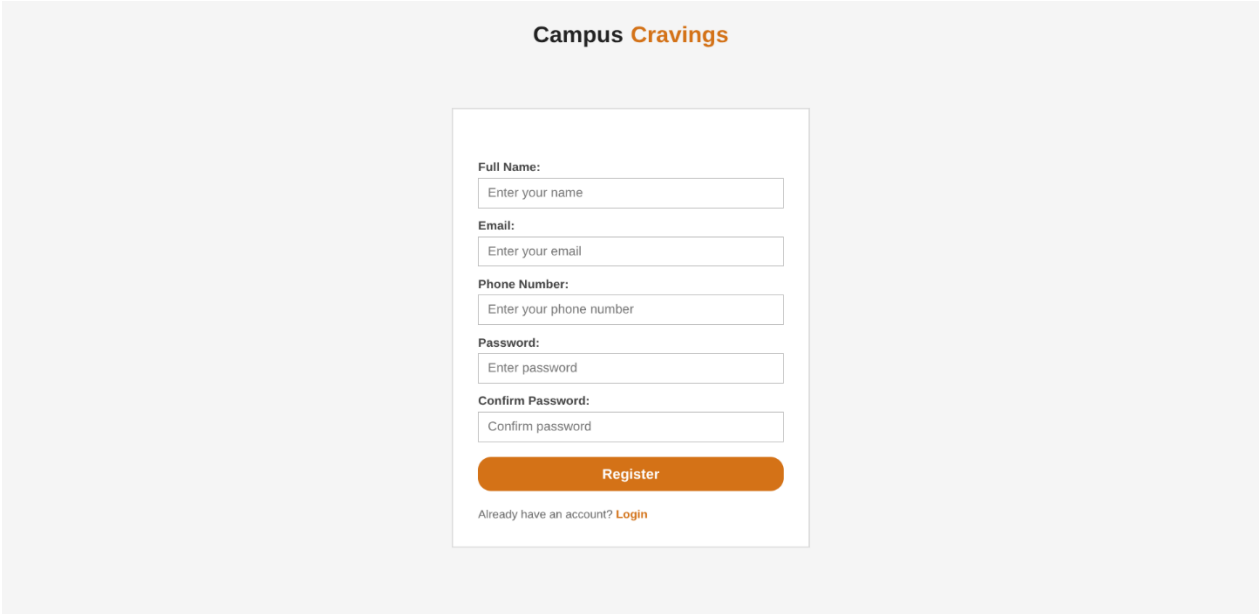

Fig 1.2: Register Page

Restaurant & Menu Management

- **Exploration:** Users can browse through a variety of campus eateries.
- **Categorization:** Items are organized into logical groups (e.g., Snacks, Meals, Drinks).
- **Detail View:** Comprehensive item information including prices and descriptions.

Ordering & Payment

- **Cart System:** Supports multi-item selection from a single restaurant.
- **Checkout Workflow:** Structured steps to confirm order details.
- **Payment Interface:** Handles the final transaction recording.

TECHNICAL ARCHITECTURE

Frontend

- **HTML5 & CSS3:** Responsive layouts using modular stylesheets (e.g., **checkout.css**, **home.css**).
- **JavaScript:** Client-side validation and dynamic interface updates (**script.js**).

Backend

- **PHP:** Server-side processing for sessions, database interaction, and business logic.
- **MySQL:** Relational database for persistent storage.

DATABASE SCHEMA

The **campus-cravings-db** database comprises the following core tables:

- **users:** Authentication and role-based data.
- **restaurants:** Storefront details and ownership links.
- **menu_items & menu_categories:** Product data and taxonomy.
- **orders & order_items:** Transactional records
- **complaints:** Customer support logs.

CONCLUSION

Campus Cravings provides solid structure for managing campuswide food services. By addressing the specific needs of students and admins through a tailored digital interface, the project successfully demonstrates how web technologies can solve real-world logistical challenges in an educational environment.
